

# SET UP A QC HUB QUICK LAUNCH ON YOUR **APPLE** SMART PHONE OR TABLET

## STEP 1

Launch the browser on Apple's iOS and navigate to the hub homepage, or other page in the hub that you would like to link to. Tap the Share button on the browser's toolbar, that's the rectangle with an arrow pointing upward. It's on the bar at the top of the screen on an iPad, and on the bar at the bottom of the screen on an iPhone or iPod Touch. Tap the Add to Home Screen icon in the Share menu

## STEP 2

You will be prompted to name the shortcut before tapping the "Add" button.

Enter a name that you will remember, like "QC HUB"

## STEP 3

The shortcut can be dragged around and placed anywhere, including in app folders, just like a normal app icon.

(To create app folders on iOS, touch-and-drag an app's icon onto another app's icon and hold it there for a moment.)

When you tap the icon, it will load the website in a normal tab inside the Safari browser app.
